Filling your prescription.

→ Getting Started At Your Retail Pharmacy.

No matter how you get your prescription filled, here are the steps to take.

1 Your pharmacy will need a prescription to order Xcopri.

If your doctor didn't send it to the pharmacy electronically, bring a paper copy.

2 Once ordered by your pharmacist, your Xcopri should arrive at the pharmacy in three to five business days.

3 Confirm with the pharmacy that your prescription is ready for pick-up.

4 Call your pharmacy at least one week before you run out of Xcopri and request they order your next prescription.

Save time by asking your pharmacy if you can **opt-in to autofill** so your prescription is refilled at the same time every month.

IMPORTANT SAFETY INFORMATION AND INDICATION FOR Xcopri® (CENOBAMATE TABLETS) CV

Do not take Xcopri if you:

- Are allergic to cenobamate or any of the other ingredients in Xcopri.
- Have a genetic problem (called Familial Short QT syndrome) that affects the electrical system of the heart.

Please see additional Important Safety Information throughout and full [Prescribing Information](#) and [Medication Guide](#).

SK Life Science has multiple partners to support you and make Xcopri easier to get than ever before.

SK Specialty Pharmacy Network

The SK Specialty Pharmacy network stocks Xcopri and can deliver it right to your door.

If you would like help filling your prescription or want to learn more about SK Specialty Pharmacy Options, call our Pharmacy Hotline at 1-833-PHARM-SK (742-7675), Mon.– Fri. 9 am–6 pm ET.

Amazon Pharmacy Partnership

Download the app, sign up and receive:

Educational materials, a medication tracker, a seizure tracker, refill reminders, and much more.

Scan the QR code or go to <https://app.redi.health/signup/xcopri>

Proven seizure reduction is real.

Look at the numbers.

A clinical study showed X COPRI reduced the frequency of seizures by up to **55%** compared to 24% with placebo.*

In fact, as many as **1 out of every 5 people** achieved **ZERO seizures with X COPRI.**§†

*During an 18-week study (6-week titration phase and 12-week maintenance phase) when participants were taking either X COPRI or placebo (sugar pill), which was added to their anti-seizure medication to treat partial-onset seizures, seizures were reduced by: 55% with 400 mg, 55% with 200 mg, 36% with 100 mg, vs. 24% with placebo.

§During the 12-week maintenance phase when participants were taking either X COPRI or placebo (sugar pill), which was added to their anti-seizure medications to treat partial-onset seizures, the percent of patients who achieved zero seizures with X COPRI was 21% with 400 mg, 11% with 200 mg, 4% with 100 mg, vs. 1% with placebo.

†Individual results may vary.

WHAT TO EXPECT FROM INSURANCE

Commercial Insurance
(usually through you or a family member's employer)

You may be eligible to get your X COPRI for **\$20** per prescription. This will happen automatically at the pharmacy when you check out.

Medicaid

You can typically expect to pay less than **\$5** per prescription.

Medicare Extra Help
(i.e., **Medi-Medi, dual-eligible, low income subsidy**)

You can typically expect to pay less than **\$15** per prescription.

Medicare Part D only

Insurance plans vary. Consult your plan for your copay costs. Medicare Part D patients have a **\$2,100** max out of pocket for all covered medications per calendar year and can enroll in the Medicare Payment Prescription Program. For more information go to www.medicare.gov/prescription-payment-plan

Get your first month of X COPRI free.

Eligible patients can receive X COPRI (12.5/25mg \Titration Pack) at no cost for the first month.

Receive a prescription from your doctor and download the trial offer here.

IMPORTANT SAFETY INFORMATION AND INDICATION (CONT'D)

X COPRI CAN CAUSE SERIOUS SIDE EFFECTS, INCLUDING:

Allergic reactions: X COPRI can cause serious or life threatening skin rash or other serious allergic reactions which may affect organs and other parts of your body like the liver or blood cells. You may or may not have a rash with these types of reactions. Call your healthcare provider right away and go to the nearest emergency room if you have any of the following: swelling of your face, eyes, lips, or tongue, trouble swallowing or breathing, a skin rash, hives, fever, swollen glands, or sore throat that does not go away or comes and goes, painful sores in the mouth or around your eyes, yellowing of your skin or eyes, unusual bruising or bleeding, severe fatigue or weakness, severe muscle pain, frequent infections, or infections that do not go away. **Take X COPRI exactly as your healthcare provider tells you to take it. It is very important to increase your dose of X COPRI slowly, as instructed by your healthcare provider.**

QT shortening: X COPRI may cause problems with the electrical system of the heart (QT shortening). Call your healthcare provider if you have symptoms of QT shortening including fast heartbeat (heart palpitations) that last a long time or fainting.

Suicidal behavior and ideation: Antiepileptic drugs, including X COPRI, may cause suicidal thoughts or actions in a very small number of people, about 1 in 500. Call your healthcare provider right away if you have any of the following symptoms, especially if they are new, worse, or worry you: thoughts about suicide or dying; attempting to commit suicide; new or worse depression, anxiety, or irritability; feeling agitated or restless; panic attacks; trouble sleeping (insomnia); acting aggressive; being angry or violent; acting on dangerous impulses; an extreme increase in activity and talking (mania); or other unusual changes in behavior or mood.

You're not alone in your journey.

Starting a new medication can leave you with questions and concerns. Talking to your doctor about XCOPRI can help. XCOPRI can also get you paired with a mentor who knows what you're going through.

Some topics you could discuss with your mentor:

- Personal experience with XCOPRI.
- Advice on building and maintaining a support system.

You've chosen a path proven to reduce seizures. Get started.

1

Tell us about yourself.
Take the PatientPartner™ survey to find a mentor who's been through a similar journey, ensuring a perfect match.

2

Message your mentor.
Meet the mentor you've been matched with and send them a message to introduce yourself and ask questions.

3

Get support and advice.
Keep in touch with an advocate who understands your experiences and can give guidance throughout your journey.

IMPORTANT SAFETY INFORMATION AND INDICATION (CONT'D)

Liver problems: XCOPRI may cause liver problems. Your healthcare provider will do blood tests to check your liver before you start XCOPRI and while you take XCOPRI if needed. Tell your healthcare provider right away if you have any symptoms of liver problems, such as: yellowing of the skin and eyes (jaundice), nausea, vomiting, unusual darkening of the urine, or feeling tired or weak.

Nervous system problems: XCOPRI may cause problems that affect your nervous system. Symptoms of nervous system problems include: dizziness, trouble walking or with coordination, feeling sleepy and tired, trouble concentrating, remembering, and thinking clearly, and vision problems. **Do not drive, operate heavy machinery, or do other dangerous activities until you know how XCOPRI affects you.**

Do not drink alcohol or take other medicines that can make you sleepy or dizzy while taking XCOPRI without first talking to your healthcare provider.

DISCONTINUATION:

Do not stop taking XCOPRI without first talking to your healthcare provider. Stopping XCOPRI suddenly can cause serious problems. Stopping seizure medicine suddenly in a patient who has epilepsy can cause seizures that will not stop (status epilepticus).

Please see additional Important Safety Information throughout and full [Prescribing Information](#) and [Medication Guide](#).

IMPORTANT SAFETY INFORMATION AND INDICATION (CONT'D)

DRUG INTERACTIONS:

XCOPRI may affect the way other medicines work, and other medicines may affect how XCOPRI works.

Do not start or stop other medicines without talking to your healthcare provider. Tell healthcare providers about all the medicines you take, including prescription and over-the-counter medicines, vitamins and herbal supplements.

PREGNANCY AND LACTATION:

XCOPRI may cause your birth control medicine to be less effective. **Talk to your healthcare provider about the best birth control method to use.**

Talk to your healthcare provider if you are pregnant or plan to become pregnant. It is not known if XCOPRI will harm your unborn baby. Tell your healthcare provider right away if you become pregnant while taking XCOPRI. You and your healthcare provider will decide if you should take XCOPRI while you are pregnant. If you become pregnant while taking XCOPRI, talk to your healthcare provider about registering with the North American Antiepileptic Drug (NAAED) Pregnancy Registry. The purpose of this registry is to collect information about the safety of antiepileptic medicine during pregnancy. You can enroll in this registry by calling 1-888-233-2334 or go to www.aedpregnancyregistry.org.

Talk to your healthcare provider if you are breastfeeding or plan to breastfeed. It is not known if XCOPRI passes into breastmilk. Talk to your healthcare provider about the best way to feed your baby while taking XCOPRI.

COMMON SIDE EFFECTS:

The most common side effects in patients taking XCOPRI include dizziness, sleepiness, headache, double vision, and feeling tired.

These are not all the possible side effects of XCOPRI. Tell your healthcare provider if you have any side effect that bothers you or that does not go away. For more information, ask your healthcare provider or pharmacist. **Call your doctor for medical advice about side effects. You may report side effects to FDA at 1-800-FDA-1088 or at www.fda.gov/medwatch.**

DRUG ABUSE:

XCOPRI is a federally controlled substance (CV) because it can be abused or lead to dependence. Keep XCOPRI in a safe place to prevent misuse and abuse. Selling or giving away XCOPRI may harm others and is against the law.

INDICATION:

XCOPRI is a prescription medicine used to treat partial-onset seizures in adults.

Please see additional Patient Information in the Medication Guide. This information does not take the place of talking with your healthcare provider about your condition or your treatment.
